4. Guidance to Downstream User to evaluate whether he works inside the boundaries set by the ES

4.1. Health						
Guidance - Health	Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented,Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels,Available hazard data do not enable the derivation of a DNEL for aspiration effects,Risk Management Measures are based on qualitative risk characterisation.					
4.2. Environment						
Guidance - Environment	Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures,Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination,Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination,Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html),Maximum Risk Characterization Ratios for air emissions 0,0011,Maximum Risk Characterization Ratios for wastewater emissions 0,77
